

Installation

Model specific instructions

For:

- **Honda CBR1100XX
Fuel Injected models only !**

These instructions are a model specific add-on to the general BoosterPlug installation instructions.

The general BoosterPlug installation instructions can be found in the "Downloads" section on the BoosterPlug.com website:

<http://www.boosterplug.com/shop/cms-downloads.html>

Installation Tips

- Install the BoosterPlug module as per the general installation papers.
- The pictures below should help you locate the AIT sensor where the BoosterPlug is installed.
- Lift front end of fuel tank to access AIT sensor in the top of the air filter box.
- You have several choices for the BoosterPlug sensor location, but our favorite place is near the steering head or under the head light. Next to the airbox snorkel air intake hole is another very good spot.
 - Just stick to the simple rules in the general installation instructions for placing the external sensor, and you'll be fine.
- Note: The BoosterPlug for the Honda CBR1100XX have a longer cable for the AIT connector than shown on our website—this is just to let you relocate the square BoosterPlug box, as there's not much room under the tank.
